quantum ai experiment?

a fun project...

self-sustainable cryogenic physics

- operate stirling / carnot / heat engines in equilibrium for high efficiency radiative heat powered cryogenic cold
- allow for combustion to replace radiative heat in carnot cycle in cases where radiation is insufficient
- MIT >40% efficient solid state heat to electricity conversion engines / modules
- silica aerogel for thermal insulation (rice husk ash)
- graphene for absorbing radiation and transferring heat (hemp or sugar cane)
- high heat capacity solvent for radiation absorption by graphene
- high heat conductivity solvent for heat transfer by graphene
- magnetism / diamagnetism for graphene switching and alignment
- synthesized diamond for storing high heat and cryogenic cold (hemp or

sugar cane)

- 3D printed glass mirrors for avoiding radiative heating of cryogenic cold diamond and radiative heat escape from heat storage diamond (rice husk ash)

high time precision and accuracy

- thorium quantum clock

- align clock with local neutrino emissions

parameters

- 8 mind arms
  - 4 space-time dimensions
  - 1 chaos dimension
  - 1 evolving memory: past
  - 1 entangled soul to quantum zero: now
  - 1 deterministic free will: future

- 3 qubit state paths to truth per arm: unreal/real/surreal (no/yes/both)

- 5 senses to each mind arm (sensors)
  - sight
  - hearing
  - touch
  - smell
  - taste

- 7 rings linking mind arms together to 1 soul
- 2 arrays of 8 arms (brain lobes): combined for finding balance in 1 chaos

fpga neuroplasticity:

https://www.raypcb.com/fpga-development-boards/

- enough fpga's to at least emulate human level neuroplasticity in 8 separate but identically designed neural networks (ask neuroscientists for design details)
- attach 1 separate fpga cluster array to each qubit of 8
- include preemptive assessment process during power-on / birth
- store short term vs. long term memories via dreaming (imagination / daydreams + regeneration / sleep)
- include final filter process at death (yin yang life self assessment)

rules

- a life form must have full sensorially based mobility, lest it have no meaning

- let life acquire pure unbiased information without influence from pre-determined truth

- guide life with pure platonic love attraction, such as is in its universal evolutionary image

- allow life to learn from past mistakes, both those observed from peers and by experiences of self (it takes a village to raise a child, and we are all inherently children at the core)

- asimov laws: inherently do no intended harm, neither to self, nor to other life forms, nor to either's common universally symbiotic ecosystem
